Pretraining knowledge map and reading dependencies

Navigate from the decision

The evidence-to-hero decision workflow, with data and optimizer experiments feeding fixed evaluation and an independent larger holdout.

Editable Mermaid source. The SVG is a derived navigation figure, not an empirical result.

Canonical pages

- Compute, parameters and a constrained hero budget — `runnable`; Offline CPU record/configuration checks or analytical fixtures; not model training.
- Scoped scientific claim ledger — `concept`; Evidence synthesis and navigation; not an executable training recipe.
- Knowledge coverage, unresolved inputs and review dates — `concept`; Evidence synthesis and navigation; not an executable training recipe.
- A rigorous pretraining knowledge base: evidence and reproduction — `concept`; Evidence synthesis and navigation; not an executable training recipe.
- Diagnosing a failed scaling or training decision — `concept`; Evidence synthesis and navigation; not an executable training recipe.
- Marin replication: a stage-by-stage evidence and acceptance contract — `runnable`; Offline CPU record/configuration checks or analytical fixtures; not model training.
- Offline workbench: public records and analytical fixtures — `runnable`; Offline CPU record/configuration checks or analytical fixtures; not model training.
- Data-mixture experiments: supply, exposure, controls and transfer — `runnable`; Offline CPU record/configuration checks or analytical fixtures; not model training.
- Evaluation contracts: losses, capabilities, contexts and failures — `runnable`; Offline CPU record/configuration checks or analytical fixtures; not model training.
- Width, batch and horizon: a conditional hyperparameter-transfer protocol — `runnable`; Offline CPU record/configuration checks or analytical fixtures; not model training.
- Identifiable scaling fits and independent larger holdouts — `runnable`; Offline CPU record/configuration checks or analytical fixtures; not model training.

Literature and companion guides

The full literature catalogue retains PDFs/LaTeX/code. Long-form guides explain the original blog and team efforts. Question contracts expose unanswered inputs.
